

## WHAT YOU NEED:

- Colored pencils
- Printed sheets you will find on the following pages

## THE SOUNDS OF THE ECOSYSTEM

Every natural environment such as the meadow, the forest, the sea, the desert or the pond may be considered as a small house, a little world populated by its inhabitants and it is called the ecosystem.

In every ecosystem there are animals, plants, water, air, soil, light, heat of the sun.

Lets see if you can guess who are the inhabitants that live in the ecosystem that I chose.

This is what you have to do:

1. Listen to the first sound

- 1° sound
- 2° sound
- 3° sound
- 4° sound
- 5° sound

2. Color the element of the ecosystem in which it belongs

3. Have fun guessing and coloring all the elements that relate to the sounds of the ecosystem.

To which ecosystem does these sounds belong?

Send me your colored drawing and I will put it on my website!
